

METHOD, SYSTEM, AND PROGRAM FOR  
CONSTRUCTING A PACKET

ABSTRACT

Provided are a method, system, and program for constructing a packet. A request  
5 to construct one packet is received, including information on at least one header and a  
payload to include in the packet. The at least one header for the received request is  
generated and the generated at least one header is written in a first queue. The payload is  
requested to include in the packet and the received payload is written to a second queue.  
The generated at least one header and payload are read from the first and second queues  
10 and the read at least one header and payload are included in the packet
